

MANAGEMENT

OUR EXCELLENCY GROUP

Our six top players

GIULIO PROPERZI

As a teenager he began working with continuous Al and Cu rod. He succeeded his father as President and C.E.O. of Continuous-Properti in 1976. As an engineer he was always at the forefront of all technical developments and holds more than 100 international patents. In 2003 he received the Mordica Memorial Award for “contributions to the wire industry’s base through research, development, innovation, or other technical pursuits”, as had his father in 1973.

ALBERTO ANNONI

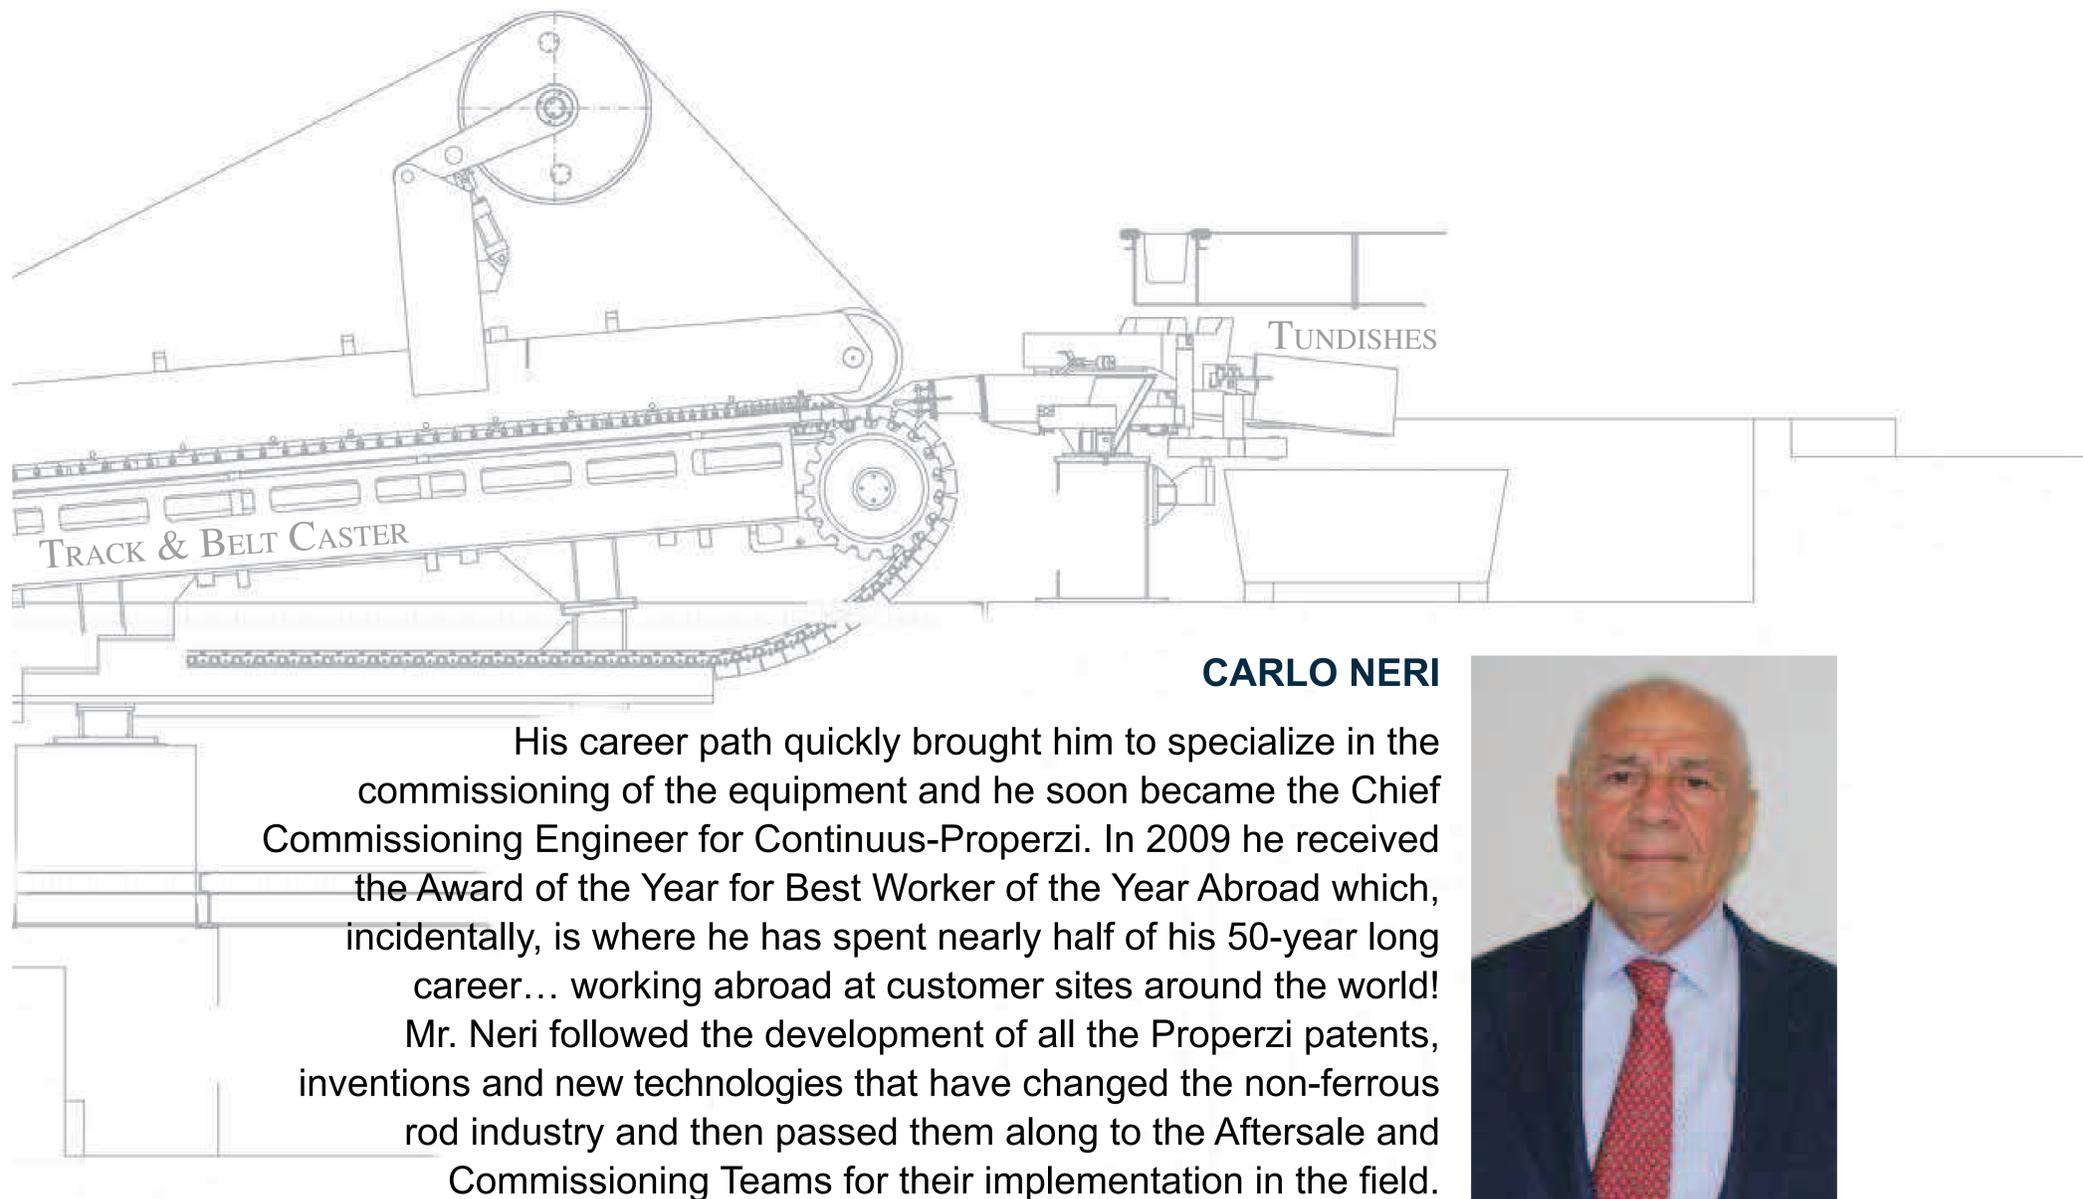

Since attaining a Master of Engineering degree, he has spent his entire career with Continuous-Properti. He now has 36 years of experience in designing casting machines, rolling mills and furnaces. As Chief Engineer at Continuous-Properti Mr. Annoni also guides all installations and start-ups. Today he is focusing on the Self-annealing method (SAM) with the Microrolling® machine: the one he studied during his Master’s!

HORACE POPS

He is currently president of Horace Pops Consulting. Previously, and for many years, he was the Director of the metals laboratory at Superior Essex in Ft. Wayne, Indiana. He has received numerous honors from WAI including the Mordica Award, the Donnellan Award and 17 technical paper awards. Dr. Pops is the sole or co-holder of 10 patents including the well-known Pops test. He is well known worldwide and is considered a “Rock Star” in the wire industry. He has been collaborating with Continuous-Properti for the last 10 years.

CARLO NERI

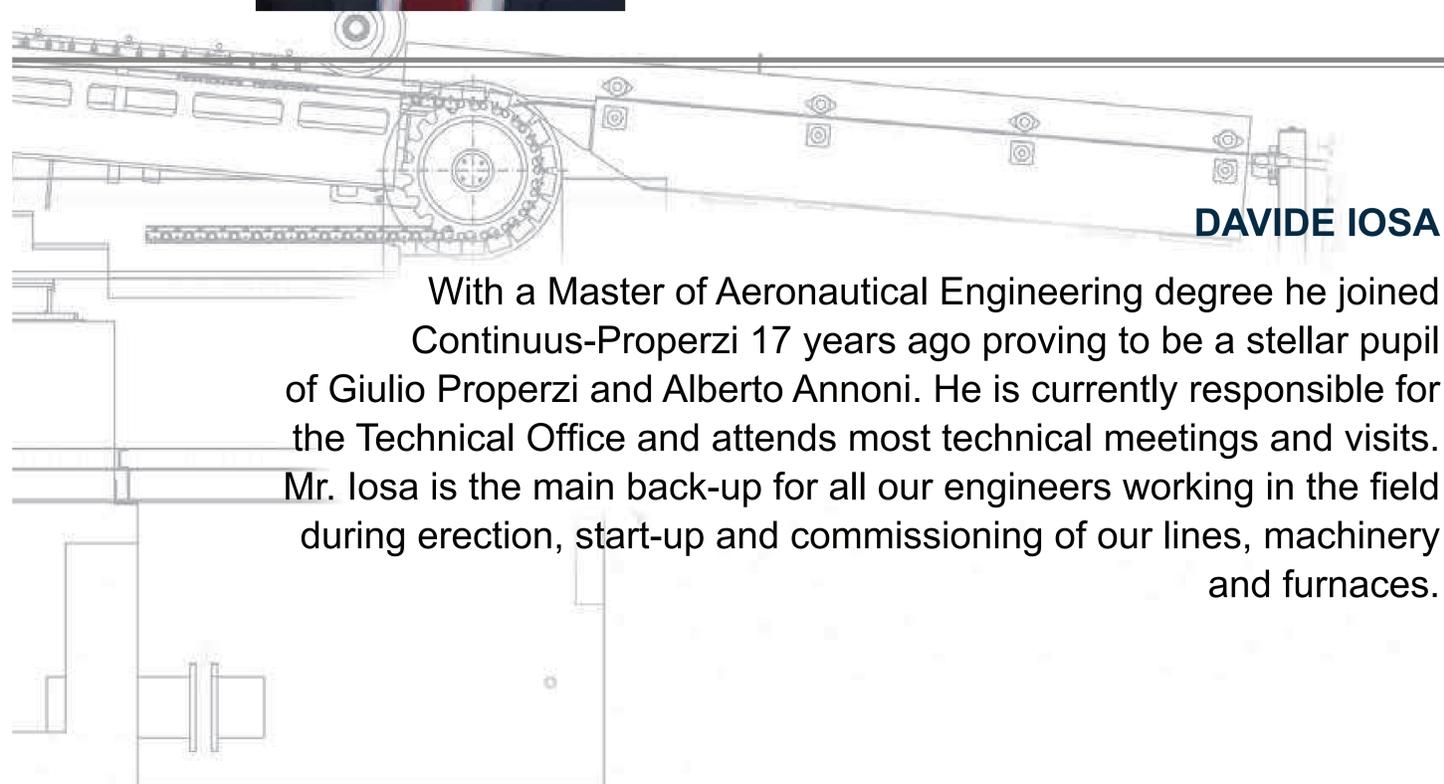

His career path quickly brought him to specialize in the commissioning of the equipment and he soon became the Chief Commissioning Engineer for Continuus-Properti. In 2009 he received the Award of the Year for Best Worker of the Year Abroad which, incidentally, is where he has spent nearly half of his 50-year long career... working abroad at customer sites around the world! Mr. Neri followed the development of all the Properti patents, inventions and new technologies that have changed the non-ferrous rod industry and then passed them along to the Aftersale and Commissioning Teams for their implementation in the field.

GIOVANNI PIROVANO

With a Master of Electrical Engineering degree and previous experience in a multinational context, he joined Continuus-Properti in 1999 and quickly became responsible for the entire electric and electronic division which today includes the fully owned subsidiary Rhoel Automation Company.

For many years he has been, and continues to be, dedicated to rendering very complex hardware and software user-friendly and in compliance with CEE or international norms.

DAVIDE IOSA

With a Master of Aeronautical Engineering degree he joined Continuus-Properti 17 years ago proving to be a stellar pupil of Giulio Properti and Alberto Annoni. He is currently responsible for the Technical Office and attends most technical meetings and visits. Mr. Iosa is the main back-up for all our engineers working in the field during erection, start-up and commissioning of our lines, machinery and furnaces.
